

Environ. Eng. Res. 2023; 28(6): 220647 https://doi.org/10.4491/eer.2022.647

Supplementary Materials

Fig. S1. effect of different GO adding ratios on phosphate adsorption by Ce-MOF-GO composite with initial concentration of 100 mg L⁻¹.

Fig. S2. Kinetic model plots (a, first pseudo-order) (b, second pseudo-order) for the adsorption of phosphate onto the adsorbents

Fig. S3. Langmuir (a) and Freundlich model of isotherm(b) for the phosphate adsorption

Fig. S4. effect of various temperatures (a) and adsorption thermodynamic (b) with initial concentration100 mg L⁻¹

Fig. S5. Reusability of Ce-MOG/GO-2% composite onto phosphate adsorption.

Fig. S6. The possible adsorption mechanism of phosphate by the adsorbent

Fig. S7. Effect of coexisting ions (P.conc. 100 mg L⁻¹) on phosphate removal by the adsorbents

Fig. S8. XRD patterns of the samples with various HAc addition in Ce-MOF/CO-2% composite material.

Fig. S9. FT-IR spectra images of the samples with adding various amount of GO.

Fig. S10. XRD patterns of the sample after four adsorption desorption cycles

Fig. S11. SEM images of the sample after four adsorption desorption cycles, first (a) second (b) third (c) forth (d) cycles, respectively.

Fig. S12. XPS spectra of Ce-MOF/GO-2% before and after phosphate adsorption, wide-scan spectra (a) P2p (b) Ce 3d(c) O1s (d), respectively.

Table S1. specific surface area and pore structure characteristics of the adsorbents

| Adsorbents | S_{BET} (m ² .g ⁻¹) | V _p (cm ³ .g ⁻¹) | D _p (nm) |
|--------------|--|--|---------------------|
| GO | 3.986 | 0.018 | 1.070 |
| Ce-MOF | 257.498 | 0.144 | 0.645 |
| Ce-MOF/GO-2% | 46.679 | 0.078 | 6.752 |

Table S2. Adsorption kinetic models for phosphate adsorption by the adsorbents

| Adaanhant | C_{1} (mg I^{-1}) g_{2} (mg g^{-1}) | | Pseudo-first-order | | | Pseudo-second-order | | | |
|--------------|---|----------------------|--------------------|--------------------------------------|----------------|---|----------------------------------|----------------|--|
| Ausorbent | C_0 (ing. L) | $q_{\rm e}$ (mg. g) | $K_1(\min^{-1})$ | $q_{\rm e,c}$ (mg. g ⁻¹) | \mathbf{R}^2 | K2.g.mg ^{1.} min ⁻¹ | $q_{e,c}$ (mg. g ⁻¹) | \mathbb{R}^2 | |
| GO | 130 | 31.43 | 0.022 | 31.5 | 0.899 | 0.005 | 33.726 | 0.910 | |
| Ce-MOF | 130 | 215.6 | 0.014 | 20.36 | 0.932 | 0.002 | 216.919 | 0.999 | |
| Ce-MOF/GO-2% | 130 | 264.7 | 0.013 | 19.27 | 0.933 | 0.002 | 265.957 | 0.999 | |

Table S3. The Langmuir and Freundlich isotherms parameters for phosphate adsorption

| A darak anta | Lan | Freundlich isotherm | | | | |
|--------------|--------------------------------|---------------------------------|----------------|------------|-------|----------------|
| Ausorbeilts | $Q^{0/}$ (mg g ⁻¹) | <i>b</i> /(L.mg ⁻¹) | \mathbf{R}^2 | $K_{ m F}$ | 1/n | \mathbf{R}^2 |
| GO | 67.84 | 0.006 | 0.992 | 2.775 | 0.481 | 0.909 |
| Ce-MOF | 244.49 | 1.323 | 0.963 | 136.376 | 0.114 | 0.907 |
| Ce-MOF/GO-2% | 308.64 | 1.917 | 0.998 | 174.823 | 0.108 | 0.722 |

Table S4. Comparison of Ce-MOF/GO-2% with other adsorbents

| NO | Adsorbents | P. C_0 (mg. L ⁻¹) | A.E. T(min) | M.A.C. (mg. g ⁻¹) | Reference |
|----|---|---------------------------------|-------------|-------------------------------|-----------|
| 1 | Ce (III) – MOF | 100-500 | 200 | 189.4 | [36] |
